

# EVALUACIÓN DE SEGUNDA INSTANCIA

Diseño de Interfaces de Usuario - DIU300

I/2021

---

## Instrucciones generales

Elabore un esquema de diagramación y maquetación de página web que responda al diseño que se muestra a continuación. Considere que debe elaborar la vista en formato móvil y de escritorio.

### **Parte 1**

Realice la identificación de todos los elementos y partes que compondrán la estructura a elaborar.

### **Parte 2 (opcional)**

Elabore la estructura de diagramación a partir de herramientas de creación de prototipo (Figma), o mediante el uso de alguna herramienta gráfica que le permita plasmar la identificación realizada.

### **Parte 3**

Desarrolle toda la estructura de la página web a partir de la correcta aplicación de los recursos de HTML y CSS para diagramación web. Recuerde que debe desarrollar el modelo para formato escritorio y de manera adicional aplique los recursos de @media-screen para elaborar el diseño en formato móvil.

### **Consideraciones adicionales**

Considere que debe visualizarse de manera correcta la estructura de una página web, lo que implica la identificación de una cabecera, un pie de página y un cuerpo con sus secciones correspondientes.

Tome en cuenta que todos los elementos deben estar formados por contenedores DIV y su ubicación y posición en pantalla debe corresponder al esquema propuesto.

Por otra parte, considere que la ubicación de los elementos debe establecerse mediante el uso de recursos de diagramación de CSS. Recuerde que debe respectar márgenes y padding para poder reproducir de mejor manera el diseño inicial.

Minimamente deben estar todos los elementos de diagramación del sitio, identificados con un nombre que haga referencia al elemento que representa y con un color de fondo o borde para poder identificar su ubicación y dimensiones en pantalla.

Recuerde que todos los colores a utilizar deben aproximarse a los empleados en el modelo de referencia; por otra parte, en cuanto a las tipografías se sugiere simplemente emplear una tipografía Sans Serif para todo el documento, y establecer las variantes que necesite en caso de que quiera representar el texto.

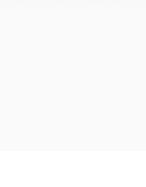

De manera adicional puede insertar etiquetas de texto con algunas palabras o párrafos Lorem para generar una mejor aproximación al modelo inicialmente planteado. De igual manera, puede insertar imágenes en los campos que correspondan. (opcional)

Recuerde que el resultado final debe ser la estructura de diagramación de la plantilla que se muestra, lo que implica que se identifiquen todos los campos correspondientes y que puedan visualizarse en el formato móvil y de escritorio.
